

Localization Readiness

Localization readiness is very poor in the HR system. It does not support multiple languages which automatically is a turn off to many people with different backgrounds. The HR system supports different time zones which is great for local people and international users. However, it does not support local calendar and only showcases international calendar. This should be improved from the team.

Suggestions:

- Should support multiple languages. Should translate to multiple languages across every pages with accuracy and correctness.
- Should support different calendars and only Gregorian calendar.
- Should greet or generate welcome message according to the locality like Namaste, Ni Hao, and so on.
